

In the Abstract:

Please amend the Abstract as follows:

--A method for transmitting trace data to a network tester, comprising: tracing data transmission between a mobile terminal and a network, transmitting the trace data by using a standardized interface specification, and controlling, via specific AT commands, the setting of the trace parameters and the communicating of the trace data. The method is applied by a trace system comprising a network tester and a mobile terminal arranged for collecting trace data and for communicating the trace data to the network tester, a standardized interface and control means for setting the trace parameters and for communicating the trace data, controlled with specific AT commands. The network tester of the system arranged to collect trace data which applies to the data transmission, comprises a standardized interface.--
